

twin steam shower

Sarasota

1300mm x 1300mm x 2190mm

The Sarasota is a twin steam shower cabin. Low step and white acrylic back walls, large monsoon rain shower, hand shower, foot massager and powerful steam generator. What makes the Sarasota special is the abundance of body jets; with six available for each seated area and a further 8 in the central panel that are directable nozzle/spray types!. This is an ideal shower for families and those who enjoy spacious, relaxing showering experience. The Sarasota has a glossy black glass central panel with touch responsive control pad set behind the glass.

This steam shower requires between 1 and 3bar of water pressure and can be supplied from a combi boiler, pressurised system etc. For gravity fed or low pressure, installing a twin impellor pump is recommended. Where water pressures are not balanced (of equal pressure) fitting a Pressure Equalising Valve is required to protect the Thermostatic Valve from damage. Our showers are designed to be freestanding, water should be made available to the shower into the corner (if corner fitting) or central at the back (if the shower fits against one wall) and be fed to a point approximately 1mtr from the floor and finished ready for 15mm compression fittings.

A single 13 amp fused spur is required to provide electricity to the shower. Bathtek showers are supplied ready to build. All boxes are able to enter through regular doorway openings, details of carton sizes are available on our website. Please also consider access for the boxes up and round stairwells etc. For full, detailed installation requirements of all Bathtek showers, please call our customer service department on 01423 522 222 or visit our website at www.bathtek.com

Ozone (o3) Cleaning. Ozone is a highly effective natural steriliser that can inactivate practically any organic contaminant on contact. By releasing Ozone into the cabin, we are able to safely decontaminate your shower. The ozone feature helps you keep your shower hygienic.
